

ABOUT ME

Full Stack + Devops Engineer specialized in MERN stack + AWS deployment with experience of building and deploying scalable, real-world applications. Developed systems involving authentication, payments, and intelligent routing (LLM-based) with performance. Self-taught Full Stack Engineer who likes to build logic from ideas and make them scalable.

Core Skills

Frontend: React.js, HTML, CSS, JavaScript, Tailwind-CSS
Backend: Node.js, Express.js, python
Database: MongoDB, Supabase, Redis, PSQl
Tools: Git, Postman, Cursor.ai, VS-Code, Github, WSL
Payment-Integrations: Stripe, Razorpay

Deployment: AWS, Render, Vercel, Railway
Concepts: API Design, Authentication & Authorization, Real-time Systems, Debugging,
Devops: AWS-deployment, Nginx, Kubernetes, docker.

PROJECTS

LLM-ROUTER

[Live](#) 

- LLM-Router is a project based on orchestration-concept and demonstrate how to use-handle multiple LLMs and output(render) a real-time result of `[[ tokens-usage ]]` and `[[ cost-estimation ]]`.
- Backend-System first analyze and assign type of user-query using a cheaper LLM-model and then decides and pick LLM according to type output from this process.
- This software plays role of an Orchestrator-system who smartly chooses the LLM that can give most suitable response(answer) to that particular User's-query(prompt)

Token-cost-estimator

[Live](#) 

- Token-cost-estimator works as a Router + Optimizer tool for user-query.
- It smartly Optimizes user's prompt by restructuring prompt with help of cheaper, fast and small LLM, Reducing tokens-usage + cost of prompt.
- Other side admins can login/verify and create, edit content and list it for sell, also can see other admin's contents.
- While preserving prompt's response quality from LLM, Gives you response + compare responses from optimized and unOptimized response quality + tokens and cost usage.
- Access/Refresh token security feature to prevent (leak of data, content, Info and anonymous-users).
- Helps user by optimizing prompt's tokens-usage + cost and shows costing of that particular prompt at scale.

CoursERA

[Live](#) 

- CoursERA is a online learning platform with multiple Interfaces (1)user-side content-consumption (2)content-control system dashboard for admins.
- Where users(students) can create-accounts, purchase and access listed content of courses
- Other side admins can login/verify and create, edit content and list it for sell, also can see other admin's contents.
- JWT based Secured authentication/authorization for role-based (user, admin) Signup/Login,
- Access/Refresh token security feature to prevent (leak of data, content, Info and anonymous-users).
- Used Stripe for payment-integration-gateway(payment-feature).

EXPERIENCE

kimo.Tech.pvt.ltd - Full Stack Developer

Mar 2025 – Present

- Built FFmpeg-based export pipelines for processing and saving recorded media.
 - Implemented features like auto-zoom, speed control, and cropping.
 - Managed audio-video synchronization pipelines for stable recording.
 - Collaborated with team to improve system performance and reliability.
-
