ABOUT ME

Full Stack Developer specializing in MERN stack with experience building scalable, real-world applications. Developed systems involving authentication, payments, and intelligent routing (LLM-based) with performance. Self-taught Full Stack Engineer who likes to build logic from ideas and make them scalable.

Core Skills

Frontend: React.js, HTML, CSS, JavaScript, Tailwind-CSS
Backend: Node.js, Express.js, python
Database: MongoDB, Supabase, Redis, PSQL
Tools: Git, Postman, Cursor.ai, VS-Code, Github, WSL
Payment-Integrations: Stripe, Razorpay
Deployment: AWS, Render, Vercel, Railway
Concepts: API Design, Authentication & Authorization, Real-time Systems, Debugging,

PROJECTS

LLM-ROUTER

Live 🔗

- LLM-Router is a project based on orchestration-concept and demonstrate how to use-handle multiple LLMs and output(render) a real-time result of [[tokens-usage]] and [[cost-estimation]].
- Backend-System first analyze and assign type of user-query using a cheaper LLM-model and then decides and pick LLM according to type output from this process.
- This software plays role of an Orchestrator-system who smartly chooses the LLM that can give most suitable response(answer) to that particular User's-query(prompt)

CoursERA

Live 🔗

- CoursERA is a online learning platform with multiple Interfaces (1)user-side content-consumption (2)content-control system dashboard for admins.
- Where users(students) can create-accounts, purchase and access listed content of courses
- Other side admins can login/verify and create, edit content and list it for sell, also can see other admin's contents.
- JWT based Secured authentication/authorization for role-based (user, admin) Signup/Login,
- Access/Refresh token security feature to prevent (leak of data, content, Info and anonymous-users).
- Used Stripe for payment-integration-gateway(payment-feature).

Excelidraw

Github 🔗

- Excelidraw is a Real-time drawing web-app Designed for multiple users(team) to draw,interact and collab with Real-Time updates.
- Users can Signup/Login, create Rooms, add multiple users to that room by sharing roomId. Just one click on join-room button and user can enter and interact with others present in that room.
- Search feature for user to search for existing rooms they wish to join.
- Plain Canvas on which user can draw different shapes + write text then edit(resize, relocate, style-change).
- Used supabase for Database where all data of rooms + draw-info + user is saved by integrating prisma which talks with db and save/edit/delete data according to request and authorization.

EXPERIENCE

kimo.Tech.pvt.ltd - Full Stack Developer

Mar 2025 – Present

- Built FFmpeg-based export pipelines for processing and saving recorded media.
- Implemented features like auto-zoom, speed control, and cropping.
- Managed audio-video synchronization pipelines for stable recording.
- Collaborated with team to improve system performance and reliability.
